# Science Homework

At PGHS, homework in Science serves as an essential tool for retrieval practice, helping students reinforce and check their understanding of lessons. The primary purposes are to solidify knowledge through revision for learning reviews, utilising knowledge organisers, and answering challenge questions. Assignments are typically completed via Educake or worksheets, with occasional long-term projects, limited to one per year, allowing students to explore topics in depth. Additional tasks may include preparing for debates to build oracy skills, conducting research activities, and, importantly, completing MRI (My Response Is) tasks, where students correct mistakes to enhance their learning after a knowledge check. Students may also be assigned homework to catch up on missed work following an absence, ensuring they remain up-to-date with their learning progression.

Homework is only assigned when it has a clear purpose, and therefore, a specific frequency is not mandated. Each task will include a recommended completion time and will be set on ClassCharts. Staff will then mark tasks as completed upon submission, and rewards are given for timely submissions. To support student success, we encourage students to seek help from Science staff at lunchtime whenever needed.
